ENAMEL SERIES:

Food storage containers with added value - Sustainable and versatile

In addition to the size, the material is crucial when choosing the right food storage containers. Enamel is a tried and tested material that is not only ideal for storing food but can also be used for heating on the stove and in the oven. Enamel is made from natural raw materials. The combination of steel and molten glass gives the tins a particularly long shelf life, extreme heat resistance (up to 400°C) and makes them particularly robust - unbreakable, scratch-resistant and dishwasher-safe. The ideal alternative to plastic food storage tins, as enamel is recyclable, naturally BPA-free and can also be used for heating.

THE ENAMEL TIN IS MORE THAN JUST A FOOD STORAGE TIN:

Can be used as a casserole dish

Suitable for the freezer

Lid included

For all types of stoves including induction

Dishwasher safe

heat-resistant up to 400°C

Sturdy and scratch-resistant

Made from sustainable raw materials

THE PROVEN ENAMEL QUALITIES ENSURE CONPUIENT USE IN THE KITCHEN:

The enamel dish is heat-resistant up to 400°C and suitable for all types of stoves, ovens and grills - ideal for preparing casseroles and gratins. The containers can be securely closed before and after use. The tins are also stackable and can be stored in the fridge and freezer to save space. The particularly smooth surface is cut and scratch-resistant and makes it easy to remove food and clean - also dishwasher-safe. Thanks to the vacuum, the food storage tin is 100% leak-proof. The durable, recyclable material is also BPA-free and can be labeled, making it the ideal alternative to plastic products.

THE MANUFACTURE OF ENAMEL PRODUCTS

In a complex manufacturing process, very special products are created from the basic materials steel and glass. First, the design of the mold is determined, the steel blank is drawn and prepared for further processing. Base enamel, consisting of molten glass, is carefully applied to the mold and fused to it at 900°C. This enameling process is repeated several times, depending on the product, until the unique HoneyWare enamel meets the desired quality criteria. Enamel combines the best properties of purely natural ingredients.

CLASSIC KETTLES - REINTERPRETED IN ENAMEL

The Cotton series gives the whistling kettle a modern and minimalist comeback.

Made of high-quality enamel, the kettles from Fujihoro are not only functional, but also a stylish highlight in any kitchen. The kettles can be used on all types of stoves. Available in two practical sizes - with a capacity of 1.6 liters and 2.1 liters - they offer sufficient capacity for preparing hot drinks for the whole family or for a cozy afternoon tea.

ENAMEL
The best for your food

VAKUUM LINE

**VACUUM ENAMEL
FOOD STORAGE TINS**

Keep food fresh for longer - the vacuum food storage containers made of enamel make it possible. The innovative lid with vacuum valve allows air (oxygen) to be extracted from the tin using a vacuum pump - this extends the shelf life of the food. Sausage, cheese, fruit and vegetables stay fresh for longer and the aroma of herbs, tea and coffee, for example, is preserved for longer. The vacuum protects the food from oxidation, minimizes moisture and protects the food from bacterial and fungal infestation.

**ENAMEL
FOOD STORAGE TINS**

The colorful enamel food storage containers from HoneyWare can be used in a variety of ways: they are ideal for cooking, baking, serving, storing, transporting, freezing, heating and more.

The pleasant trendy colors give the universal storage containers a fresh, modern look - while naturally retaining their proven qualities. The enamel dish is heat-resistant up to 400°C and therefore suitable for all types of stove, ovens and grills. The enamel containers are also stackable and can be stored in the larder, fridge and freezer to save space. The particularly smooth surface is cut and scratch-resistant and makes removing food residues and cleaning particularly easy - also dishwasher-safe.
